Study Food and Sustainability Abroad in Vietnam this Summer

The Critical Studies on Food Systems and Sustainability program in Vietnam makes extensive use of the whole country as a site. Vietnam is an extraordinary country, filled with a remarkable history and culture, and a visual feast for the eyes. Students will encounter and visit more of the country and its features than most travelers. We will study at museums, historic and religious sites, markets, restaurants, and farms, ethnic minority villages, local academic institutions, as part of regular site visits. Students will learn sufficient Vietnamese to travel independently and to converse on food-related topics. We will interview experts in the Vietnamese food industry, from growers to chefs, as well as experts on the crisis of rice production, food security, food hygiene, and food quality. All site visits are in support of the courses and include encouragement to practice Vietnamese conversation. The program is designed, promoted and managed by Gustolab International: Food Systems and Sustainability.

Learn more about the 2020 summer program
